

# IAPMO Certified Rainwater Harvesting Tanks

## UrbanGreen® Rainwater Harvesting Systems

At the heart of every rainwater harvest system is **the tank**. Contech is the *only* rainwater harvesting system provider to use steel reinforced polyethylene tanks (SRPE). This unique material combines the strength of steel with the durability of plastic, making an extraordinarily strong and durable tank.

Contech SRPE tanks have been certified by the International Association of Plumbing and Mechanical Officials, an ANSI-Accredited Standards Development Organization. Contech tanks are also in compliance with the Uniform Plumbing Code (UPC®) and have received the Los Angeles City RR Approval RR5726.

### THE SRPE TANK ADVANTAGE:

- Each tank is factory-tested for leakage before shipment
- Tanks include inlet stub, outlet stub, calming inlet, 36" diameter access riser, delivery to the jobsite
- Standard tank sizes are 60", 72", 84", 96", 108", and 120"
- Tank storage volume range from 2,000 – 22,500 gallons
- Multiple tanks can be connected using a small diameter manifold
- Tanks are part of a fully integrated system that includes pretreatment tanks, pumps, filter systems, and controls
- Tank standard details can be found on our website [www.conteches.com/RWH](http://www.conteches.com/RWH)

### Contech SRPE Tank Certifications:

- IAPMO IGC 329 Certified
- Uniform Plumbing Code (UPC®)
- Los Angeles City RR Approval RR5726
